Lab#13 Create a HTML form that accept the student data like enrollment number, name, email id, password, confirm password, phone number, address, gender, choices of branch and perform client-side validation using JavaScript.

TAGS USED	DESCRIPTION
<!DOCTYPE html>	Declares the document as an HTML5 document.
<html>	Root element of the HTML document.
<head>	Contains metadata and information about the HTML document.
<meta>	Defines metadata such as character encoding and viewport settings.
<title>	Specifies the title shown in the browser tab.
<body>	Contains all visible content of the webpage.
<h1>	Defines the main heading of the registration form.
<form>	Creates a form to collect student details.
<input type="text">	Accepts enrollment number, name, and phone number.
<input type="email">	Accepts the student's email address.
<input type="password">	Accepts password and confirm password securely by hiding characters.
<textarea>	Accepts the student's address in multiple lines.
<input type="radio">	Allows the student to select gender.
<select>	Creates a dropdown list for selecting a branch.
<option>	Defines an option inside the dropdown list.
<input type="submit">	Creates a button to submit the registration form.
 	Inserts a line break.
<script>	Contains JavaScript code for form validation.
function	Defines the validateMyform() function to validate the form.
document.getElementById()	Retrieves an HTML element using its ID.
document.querySelector()	Selects the checked gender radio button.
if	Checks whether a validation condition is true.
alert()	Displays a message or validation error to the user.
return false	Stops form submission when validation fails.
return true	Allows form submission when all validations pass.
.match()	Checks whether a value matches a specified regular expression.

Final Outcome:

Code Snippet:

```
<!DOCTYPE html>
<html lang="en">

<head>
   <meta charset="UTF-8">
   <meta name="viewport" content="width=device-width, initial-scale=1.0">
   <title>Document</title>
</head>

<body>
